

Career Recommendations

To increase the chances of landing a Software Engineering role in NZ, here are three actionable recommendations for the provided CV:

1. ****Highlight transferable skills****: Although the candidate has a background in Electrical Engineering and commercial leadership, they should emphasize the skills that are transferable to Software Engineering, such as problem-solving, analytical thinking, and project management.
2. ****Emphasize Software Engineering education and projects****: As the candidate is currently pursuing a Master of Software Engineering, they should provide more details about their education, such as relevant coursework, projects, and any programming languages or technologies they've learned.
3. ****Tailor the CV to the Software Engineering role****: The CV should be tailored to showcase the candidate's potential as a Software Engineer, rather than a commercial leader. This can be achieved by reordering the sections, highlighting technical skills, and using language from the Software Engineering industry.
